PROFESSIONAL SUMMARY

Final semester Computer Science student and highly motivated developer with a diverse background ranging from game developing to modern web architectures. Proven expertise in the MERN stack (MongoDB, Express, React, Node.js) and advanced Unity scripting. Successfully collaborated on projects involving complex C# scripting for hardware integration and specialized game mechanics. I combine a strong logical foundation with a focus on building responsive, user-centric web applications and high-performance interactive experiences.

UPDATED PROFESSIONAL EXPERIENCE

1) ITRONIX INFO | GAME DEVELOPER 2020 – 2021

- Acted as a technical lead in assisting a student at Clarkson University (USA) with their Final Year Project.
- **Hardware Integration:** Developed specialized C# scripts to integrate complex 3D working models into the Oculus VR environment, ensuring seamless interaction and hardware-software synchronization.

PROFILE

MERN Stack Developer & Unity Game Dev | Specialized in building immersive digital experiences and scalable full-stack web applications.

<https://github.com/abbaxi786>

- **Game Mechanics:** Engineered robust door locking/opening systems and physics-based interactions within Unity.
- **Logic Development:** Gained deep experience in problem-solving and programming logic through the development of platformer and projectile-based games.

2) PUNJAB UNIVERSITY SKILL DEVELOPMENT | WEB DEVELOPMENT TRAINEE 6TH SEMESTER BS-CS

Mastered professional frontend development, UI/UX design principles, and hosting strategies for high-traffic websites.

3) NAVTTC | MERN STACK TRAINEE PRESENT

- Undergoing rigorous training in full-stack architecture, focusing on real-time data integration and secure authentication.
- Building end-to-end web applications using MongoDB Atlas and modern React frameworks.

PROJECTS

- **Next js Password Manager:** A secure web application for credential management built with Next.js and Tailwind CSS by using AES encryption and jwt tokens (<https://password-manager-2sn.vercel.app/>).
- **MERN stack ecommerce Project:** The frontend is hosted on vercel and backend is hosted on railway platform. Here is Link of the project: <https://bullish-ecommerce-frontend.vercel.app>
- **Unity Platformer & Rocket Shooting Games:** Designed and scripted 2D platformer and shooting games, focusing on projectile physics and character movement logic.
