

# OKASHA ANAS

Islamabad, Pakistan   okashaanas986@gmail.com   +92 313 0101961   <https://github.com/anasanas876>

## SUMMARY

AI student (semester 7/8, PAF-IAST) with proven hands-on experience building and deploying production-grade AI automation pipelines. Architected an end-to-end YouTube content pipeline that reduced manual effort by 70–80%. Proficient in Python, TensorFlow, PyTorch, and workflow automation (n8n, OpenAI API). Seeking an AI/ML internship to apply practical skills to real-world problems.

## EDUCATION

### BS in Artificial Intelligence

2023 – 2027

PAF-IAST University, Haripur • CGPA: 3.0 / 4.0 • 7th Semester

## SKILLS

**Languages:** Python, JavaScript, SQL, HTML5, CSS3

**ML / DL (Proficient):** TensorFlow, PyTorch, Scikit-Learn

**Neural Architectures:** ANN, CNN, RNN, U-Net, Transformers

**MLOps & Deployment:** Model training, evaluation & deployment — Flask, FastAPI, Streamlit

**Automation & Tooling:** n8n, OpenAI API, ElevenLabs, ffmpeg, Git

**Databases:** MySQL, Supabase, DeepLake, Pinecone

**Data & Analytics:** Pandas, NumPy, Matplotlib, Seaborn, Excel

**Techniques:** RAG (Retrieval-Augmented Generation), MCP (Model Context Protocol)

## PROFESSIONAL EXPERIENCE

### AI Automation Intern | HTML5 Solutions

Jun 2025 – Nov 2025 | Gujrat, Pakistan

- Architected and deployed an end-to-end automated YouTube content pipeline processing 10+ videos/week, cutting manual effort by 70–80%.
- Built automated workflows using n8n, OpenAI API, ElevenLabs, and ffmpeg with custom JavaScript orchestration.
- Evaluated 5+ open-source automation frameworks (including Zapier, Make) for production suitability; selected n8n, reducing infrastructure complexity.
- Authored full pipeline documentation, significantly improving developer onboarding and cross-team collaboration.

## PROJECTS

### Retinal Vessel Segmentation using U-Net — Python, TensorFlow, U-Net, OpenCV, Streamlit

Researched the impact of Digital Image Processing (DIP) preprocessing techniques on segmentation accuracy using U-Net on the DRIVE dataset.

Analysed how contrast enhancement, noise reduction, and normalization affect model performance on medical imaging data.

Achieved 75% Dice score; deployed as an interactive web app using Streamlit with real-time inference.

### ML Course Projects — Classifiers & Regressors — Python, Scikit-Learn, Pandas, NumPy

Implemented and compared supervised learning models (linear/logistic regression, decision trees, SVMs) on real-world datasets.

Applied data preprocessing, feature engineering, cross-validation, and performance optimization techniques.

## **Autonomous Lead Scorer Agent** [GitHub](#)

### **Languages and Tools Used:**

Python, JavaScript, Machine Learning, n8n

### **Project Description:**

This Project autonomously qualifies and scores incoming leads. I Trained Machine Learning model on Leads X education dataset and extracted those weights. Those weights were further used in n8n for lead scoring. Workflow does not call any external API or LLM. It uses pre-trained ML Model to qualify and score the lead.

### **Impact:**

Autonomous and Fast.

Saves hours of Manual working by automating Lead Scoring Process for Sales Team.

Saves Cost by using Pre Trained ML Model instead of relying on API calls or LLMs.
